

# An Important Update from the Infection Prevention Team

## Non-PPE Comfort Mask Guidance

### IMPORTANT

- Comfort masks do not offer the health care worker any protection against COVID-19.
- Do not touch the comfort mask during client care activities. If a comfort mask needs to be adjusted or removed, perform hand hygiene with alcohol-based waterless hand gel or soap and water before and after touching the mask.

### Use a comfort mask when:

- When providing care to all clients who are not infected with COVID-19 or who have resolved COVID-19

### Do not use a comfort mask when:

- Caring for a client with any signs or symptoms of respiratory illness
- During procedures that generate splashes or sprays of blood or body fluids
- Caring for a client who has been exposed to, has pending testing, or is confirmed positive for COVID-19

**Important: Comfort masks must be removed, and appropriate masks must be applied for client care activities that require a medical surgical mask or N95.**

### Types of comfort masks:

- Cloth masks: Should ideally be made of fabric that is breathable, washable, and tightly woven.
- Disposable masks not approved for health care use (not effective in protecting against moisture)

### Care for comfort masks:

- Cloth masks should be laundered daily with hot water and detergent.
